Preface

We are excited to present the Proceedings of the 19th International Natural Language Generation Conference (INLG 2026). This year's INLG takes place from October 17 to October 21, 2026 in Utrecht, the Netherlands, and is organized by Utrecht University.

Conference details

The INLG conference is the main international forum for the presentation and discussion of research on Natural Language Generation (NLG). This year, we received 171 conference submissions (including 17 from ARR) and 5 demo paper submissions. After a peer review process, 80 long papers, 13 short papers, and 5 demo papers were accepted to the conference and are included in these proceedings.

The accepted papers showcase the breadth of NLG research, including work on applications, such as data-to-text tasks, machine translation, and summarization; language model evaluation; and many other topics of interest to the NLG community. We thank Rudali Huidrom for serving as Publication Chair and preparing these Proceedings.

Keynotes

We are also excited to have four keynote speakers contributing to this year's program. They will talk about distorted practices within current NLP research culture, language games as tools to evaluate language models' capabilities and for teaching, variation in human judgments and the role of explanations (both by humans and language models), and the complexity of sociotechnical generative systems. The keynote speakers are:

- Ehud Reiter, University of Aberdeen, Lifetime Achievement Keynote
- Malvina Nissim, University of Groningen
- Marie-Catherine de Marneffe, FNRS – UCLouvain
- Seraphina Goldfarb-Tarrant, Cohere

Generation Challenge

In continuation of a long tradition that goes back to 2007, INLG is hosting a Generation Challenge, a track of the main conference focused on developing shared tasks for NLG. The track is chaired by Simon Mille and Saad Mahamood and is described in its own proceedings volume.

Workshops

Four workshops are co-located with the main conference:

- Alternative Architectures and Generative Paradigms for NLG.
- The 2nd Workshop for Young Researchers in Natural Language Generation (YNLG).
- Workshop for Industrial NLP: NLP Research Towards Safety, Reliability, and Real-World Impact
- The 4th Workshop of AI Werewolf and Dialog System 2026 (AIWolfDial2026)

Tutorial

The program also offers a tutorial, titled *Beyond Leaderboards: Evaluation Practices for Open-Ended and Perspectival NLG*. This tutorial provides a practical, hands-on guide to evaluating open-ended NLG by introducing a five-layer design stack that helps researchers move beyond simple leaderboards to responsibly handle subjectivity and annotator disagreement. Presenters are Christina Niklaus (University of St.Gallen), Thomas Huber (University of St.Gallen).

A reflection on the state of INLG

Like all conferences in our field, we have had to deal with a major increase in submissions this year (see Table 1 below). Generally speaking, this is good news, a growing number of people is interested in natural language generation! At the same time, it is also a risk to our community, next to the increased pressure on the reviewing process, (over)burdening our reviewers, growing too quickly might also result in a loss of tradition and identity of our conference.

Year	2018	2019	2020	2021	2022	2023	2024	2025	2026
Submissions	102	147	119	76	51	98	96	122	176

Table 1: Direct submissions to INLG, excluding submissions via ACL's Rolling Review system.

What is INLG about?

For a long time, INLG has been a venue where researchers from academia and industry meet to discuss the development and deployment of NLG systems and the challenges that arise from this. The conference was always known for its strong emphasis on (human) evaluation and for its continued embrace of rule-based systems. In real-world settings, these are surprisingly hard to beat for their robustness. The conference has also focused on cognitive aspects, for instance, on gaining a deeper understanding of the differences and similarities between human and automatic language generation—a classic example is the generation of referring expressions.

The future of INLG

What does the future hold for INLG? We can imagine the possible nature of future editions as being on a spectrum from "focused on classical NLG" to "just another NLP conference." Once we as a community have determined where on that spectrum we would like to be, we can also think about ways to arrive at our preferred destination. For example, future editions of INLG could have:

- A narrower scope accepting papers on fewer specific topics (potentially changing with each edition).
- More detailed reviewer instructions, for instance, papers must include human-based studies.
- Tutorials and hackathons on bringing aspects of rule-based systems into current LLM-based architectures.

But these decisions are really up to the SIGGEN community. We are looking forward to discussing this topic at the conference.

Your INLG 2026 program chairs,
Guanyi Chen, Laura Perez-Beltrachini, and Emiel van Miltenburg

Organizing Committee

Program Chairs

Guanyi Chen, Central China Normal University
Laura Perez-Beltrachini, The University of Edinburgh
Emiel van Miltenburg, Tilburg University

Generation Challenge Chair

Simon Mille, CNRS, University of Bordeaux

Workshop & Tutorial Chair

Jian Yang, Beihang University

Local Organizer Chairs

Albert Gatt, Utrecht University

Local Organizers

Amirhossein Mohammadi, Utrecht University
Anna Wegmann, Utrecht University
Daniil Ignatev, Utrecht University
Dongxu Lu, Utrecht University
Hugh Mee Wong, Utrecht University
Menan Velayuthan, Utrecht University
Nan Li, Utrecht University

Publication Chair

Rudali Huidrom, Indraprastha Institute of Information Technology, Delhi

Sponsor Chair

Robert Weissgraeber, AX Semantics

SIGGEN Board

Chenghua Lin, University of Manchester
David M. Howcroft, University of Aberdeen
Saad Mahamood, Shopware
Simon Mille, CNRS, University of Bordeaux
Patrícia Schmidtová, Charles University

Program Committee

Area Chairs

Lara J. Martin, University of Maryland
Saad Mahamood, Shopware
Kees Van Deemter, Utrecht University
Lea Krause, Vrije Universiteit Amsterdam
Kelvin Han, Singapore Institute of Technology
João Sedoc, New York University
Albert Gatt, Utrecht University
David M. Howcroft, Aberdeen University
Tirthankar Ghosal, Oak Ridge National Laboratory
Simon Mille, University of Bordeaux
Guanyi Chen, Central China Normal University

Reviewers

Rim Abrougui, Harsha Aduri, Shubham Agarwal, Elaf Alhazmi, Manar Ali, Jose Maria Alonso-Moral, Amith Ananthram, Miriam Anschütz, Anya Belz, Savita Bhat, Daniel Braun, Gordon Briggs, Alberto Bugarín-Diz, Hendrik Buschmeier, Michele Cafagna, Silvia Casola, Thiago Castro Ferreira, Kranti Chalamalasetti, Yllias Chali, Watson Wei Khong Chua, Miruna Clinciu, Brian Davis, Xiangjue Dong, Pablo Duboue, Ondřej Dušek, Jane Arleth dela Cruz, Ashraf Elnagar, Nils Feldhus, Esteban Garcés Arias, Dimitra Gkatzia, Javier González Corbelle, Martijn Goudbeek, Tahsina Hashem, Akio Hayakawa, Behnam Hedayatnia, Thomas Huber, Aki Härmä, Evgenia Ilia, Nikolai Ilinykh, Anton Karl Ingason, Takashi Inui, Tatsuya Ishigaki, Joseph James, Yangfeng Ji, Simeon Junker, Asteria Kaeberlein, Mihir Kale, Dmytro Kalpakchi, Yoshinobu Kano, Seiya Kawano, Masayuki Kawarada, Kristina Kobrock, Emiel Krahmer, Maurice Langner, Guy Lapalme, Seolhwa Lee, Leo Leppänen, Ashley Lewis, Tyler Loakman, Khyati Mahajan, Zola Mahlaza, Ruslana Margova, Aleksandre Maskharashvili, David D. McDonald, Kathleen McKeown, María Miró Maestre, Sourabrata Mukherjee, Alwarappan Nakkiran, Shashi Narayan, Huy-Tien Nguyen, Long HB Nguyen, Elizabeth Nielsen, Anna Nikiforovskaya, Rafael Oleques Nunes, Kristýna Onderková, Chinonso Cynthia Osuji, Soma Paul, Paul Piwek, Rhitabrat Pokharel, Ehud Reiter, Matīss Rikters, Julian Rodemann, Yusuke Sakai, Fahime Same, Patrícia Schmidtová, Vera Schmitt, Stephanie Schoch, Ethan Seefried, Anudeex Shetty, Andrew Shin, Manish Shrivastava, Judith Sieker, Catarina Silva, Jasivan Alex Sivakumar, Adarsa Sivaprasad, Yifei Song, Maximilian Spliethöver, Yaji Sripada, Benno Stein, Symon Jory Stevens-Guille, Svetlana Stoyanchev, Kristina Striegnitz, Mengxuan Sun, Barkavi Sundararajan, Hiroya Takamura, Marc Tanti, Aman Singh Thakur, Mariët Theune, Craig Thomson, William Thorne, Stefan Ultes, Sowmya Vajjala, Chris Van der Lee, Qingyun Wang, Zimu Wang, Taro Watanabe, Hugh Mee Wong, Huajian Zhang, Yongxin Zhou, Ingrid Zukerman

Table of Contents

CAP: Contrastive Activation Patching for Locating, Comparing, and Steering Neurons in Multilingual LLMs
Aleksandr Semenikhin, Markus Frey, Ondřej Dušek, Lucie Flek and Patrícia Schmidtová 1

PLeW-NLG: Interactive Exploration of Human Evaluation Data across NLG Tasks
Fahime Same, Leonard Sprague and Francesco Cangemi 4

A Tool for Collecting Validated Triple Sets for Data-to-Text Generation
Mark Andrade, Simon Mille, Anya Belz and Brian Davis 8

TruthSplit: Interactive Generation of Multi-Perspective Reasoning Graphs for Contested Claims
Lion Six, Adrien Zaradez, Thomas Huber and Christina Niklaus 11

SeanchlÓCR: A platform for Transformer-based transcription of Irish Gaelic Script
Sháhín De Faoite Houshidari, Brady Meade and Ellen Rushe 14
